

SANCHIT GOYAL

BACKEND & PLATFORM ENGINEER | TECH LEAD

Gurgaon, India (open to international relocation) | +91 98733 03451 | sanchitgoyal2604@gmail.com | <https://www.linkedin.com/in/-sanchit>

PROFESSIONAL SUMMARY

Tech Lead with 10+ years in backend and platform engineering, currently at PayPay — Japan's largest mobile payment service. Owner of a multi-tenant communications platform serving four regulated financial entities at 20,000 notifications/second; led a ~300M-row TiDB-to-Aurora migration that cut \$1M in annualized cost and took an LLM customer-support agent from PoC to 100% rollout. Expertise in Java, Kotlin, Python, Spring Boot, Kafka, AWS, and distributed system design.

CORE SKILLS

Languages & Frameworks: Java, Kotlin, Python, Spring Boot

Infrastructure & Data: AWS, Kubernetes, Docker, Terraform, Kafka, Aurora, MySQL, Cassandra, Redis, Prometheus, Grafana, System Design, Microservices

AI & ML: LLM Applications, RAG, AI Agent Design, Agent Memory

PROFESSIONAL EXPERIENCE

Tech Lead | PayPay India

Gurgaon, India | Apr 2024 – Present

PayPay — Japan's largest mobile payment service (SoftBank Group)

- Owned a multi-tenant communications platform for PayPay, PayPay Card, PayPay Bank, and PayPay Securities; created sister-company onboarding guidelines and isolated tenants to prevent noisy-neighbor impact.
- Scaled push, email, SMS, in-app, LINE, WhatsApp, and merchant-webhook channels 5x, from 4,000 to 20,000 notifications/second, using Kafka/queues, worker autoscaling, batching, rate limiting, and tenant quotas/isolation.
- Built end-to-end observability on Prometheus and Grafana that connects notifications to campaigns or transactions, enabling CTR/CVR measurement for campaigns and strict SLA monitoring for transactional notifications; set technical standards and reviewed designs for 7–8 engineers. Diagnosed and shipped a fix for a Java 21 virtual-thread issue within one week.
- Launched PayPay Points (Limited-Time) to production, owning point-system implementation and reconciliation for expiry-aware, restricted-service points. Solved complex refund/reconciliation flows, supported 350 TPS peak point grants, and received a Rockstar Award.
- Owned TiDB-to-Aurora migration from PoC through production release, partnering with two DBAs; migrated a ~75M-row wallet table, ~225M-row account table, and high-volume transaction/idempotency data. Dual-write/replication, live partition rotation, and archival reduced annualized costs by \$1M.
- Designed the RAG knowledge pipeline and agent-memory system for an LLM customer-support agent; took it from PoC through pilot to 100% rollout, with P90 time-to-first-token of 5 seconds and cost below ¥5 (~US\$0.03) per conversation. Implemented public-knowledge grounding and human escalation for high-risk financial issues.

Senior Backend Engineer | PayPay India

Gurgaon, India | Oct 2023 – Mar 2024

- Contributed to migrating PayPay Point accounts from a complex wallet domain into a dedicated point system. Under an architect-defined HLD, a seven-engineer team owned LLD, cross-team coordination, implementation, and phased rollout.
- Delivered data/API migration, reconciliation, testing, and production-readiness work; completed a 100% phased rollout with payment latency within SLA and no data-consistency incidents. Increased production peak throughput from 750 to 850 TPS and delivered a 33% performance improvement.

Senior Lead Engineer | Guardian India Operations

Gurgaon, India | Aug 2021 – Sep 2023

Guardian Life — US Fortune 250 insurance & healthcare group

- Led and mentored 5+ engineers modernizing legacy healthcare platforms into microservices, including phased service decoupling and migration to a new claims platform.

Lead Engineer / *Guardian India Operations*

Gurgaon, India | Jan 2020 – Jul 2021

- Designed cloud-to-legacy integration architecture and delivered an Angular self-service configuration application on AWS Lambda, API Gateway, and DynamoDB, saving \$12K per client annually; integrated Drools business rules to reduce client unloading time by 50%.

Software Engineer / *Orange Business Services*

Gurgaon, India | Aug 2019 – Dec 2019

Global network & digital services arm of Orange S.A. (France)

- Built four reusable components and scalable application features, reducing estimated development effort by 20% across multiple projects.

Business Systems Analyst / *Optum Global Solutions*

Gurgaon, India | Aug 2018 – Jul 2019

UnitedHealth Group — the world's largest healthcare company

- Designed architecture for a microservices migration and developed a cloud-based automation proof of concept; automated manual work to eliminate approximately 20 hours per week and improve core processes 3×.

Software Engineer / *Optum Global Solutions*

Gurgaon, India | Jan 2018 – Jul 2018

- Modernized a framework to reduce processing time by 3×.

Associate Software Engineer / *Optum Global Solutions*

Gurgaon, India | Jul 2016 – Dec 2017

- Delivered features and production fixes in Java, JavaScript, and jQuery.

EDUCATION

B.Tech, Electronics & Communications Engineering | Greater Noida Institute of Technology (Dr. A.P.J. Abdul Kalam Technical University), India | 2016
